Professional Summary

Versatile Software Developer and Computer Science student with experience building full-stack and mobile applications using Python (Flask), JavaScript, Flutter, Android (Java/XML), and Firebase. Experienced in REST-based backend development, user-focused interface design, debugging, and collaborative development within agile teams.

Education

Bachelor of Science in Computing Science *Langley, BC*
Trinity Western University *2023 – 2027*

Diploma in Automation and Robotic Engineering *Telangana, India*
Central Institution of Tool Design *2020 – 2023*

Technical Skills

Programming Languages: Python, Java, Dart, JavaScript, XML, Rust, C, C++, Fortran, Julia, Perl, flutter, React

Frameworks & Platforms: Flask, Firebase (Firestore, Authentication), Android SDK, Flutter

Web & Backend Development: REST APIs, HTTP-based services, Backend API design, Full-stack web applications

Tools & Technologies: GitHub, Android Studio, VS Code, Markdown, Docker

Development Practices: Agile collaboration, Version control workflows, Rapid prototyping, UI-focused development

Experience

App Development Intern — Acsestech Consulting Services Pvt. Ltd., Hyderabad, Telangana, India *Apr 2025 – Aug 2025*

- Developed 6+ mobile application features using React Native, improving app responsiveness and overall user experience.
- Integrated RESTful APIs and handled JSON data, enabling seamless frontend-backend communication.
- Identified and resolved 20+ bugs through debugging and testing, improving application stability and reducing crash occurrences.
- Built reusable UI components based on design specifications, reducing development time for new features.
- Collaborated with a team using Git and agile workflows, contributing to regular code updates and sprint deliverables.
- Tested applications across multiple devices to ensure compatibility and performance consistency.

App Development Intern — Verzeo (ImmenseSphere), Hyderabad, Telangana, India *Jun 2022 – Jul 2022*

- Developed and improved 10+ Android UI screens using Java/XML and responsive design principles, achieving a 30% improvement in layout consistency and usability.
- Debugged and optimized performance issues using Android Studio profiling tools, reducing application crashes and improving runtime stability by approximately 25%.
- Collaborated in an Agile-style workflow using Git and version control best practices, improving iteration speed and code quality.
- Built reusable UI components integrated across 3+ application modules, increasing development speed for future features by approximately 20%.

Projects

Cipher BC — Regulatory Intelligence Portal | ***Python, Flask, REST APIs, HTML, LLMs*** *github.com/itsgnex/nw-hackathon-2026*

- Built a web-based AI legal assistant for British Columbia regulations, enabling users to ask natural-language questions related to housing, employment, and immigration law.
- Designed a privacy-first document Q&A system where uploaded PDFs are processed entirely in memory, converted to text, passed to the language model, and immediately discarded with zero data retention.
- Implemented intent classification and dynamic prompting to support general legal guidance, document-specific queries, and automatic document summarization.
- Developed a Flask-based backend API and a lightweight frontend using HTML, CSS, and vanilla JavaScript, supporting text queries, PDF uploads, and Markdown-rendered AI responses.
- Collaborated in a two-person hackathon team using Git-based workflows, rapidly iterating on features and architecture under strict time constraints.

FoodLink Donation Intake System — Client Project (Android, Firebase) *github.com/itsgnex/Donation-Intake-tracker*

- Developed an end-to-end donation logging platform for FoodLink Society, replacing a fully manual paper-based process with a scalable digital system.
- Translated 47 user stories into complete workflows supported by UML diagrams and architecture planning for a four-person development team.
- Implemented features including offline sync, staff dashboards, audit tools, and editable entries, reducing data loss by approximately 90%.
- Designed a Firestore schema with 6+ collections to support real-time monthly and yearly reporting.
